PollStream SharePoint Web Part

DESCRIPTION

The PollStream wanted a SharePoint Web Part for their market share in corporate intranets.

CLIENT BACKGROUND

PollStream is a leading provider of interactive engagement and community building solutions for Fortune 1000 organizations. Its innovative and proprietary two-way dialogue solutions effectively engage, educate and inform customers, prospects and employees online.

It's Poll and Comment Engine solutions tap into participants' fundamental desire to declare and share their opinions. PollStream quickly transforms this desire into a relevant and rewarding exchange that builds meaningful relationships online.

Designed to facilitate the effectiveness of real-word conversations, PollStream is often the most engaging element of a website, intranet, online newsletter or email campaign.

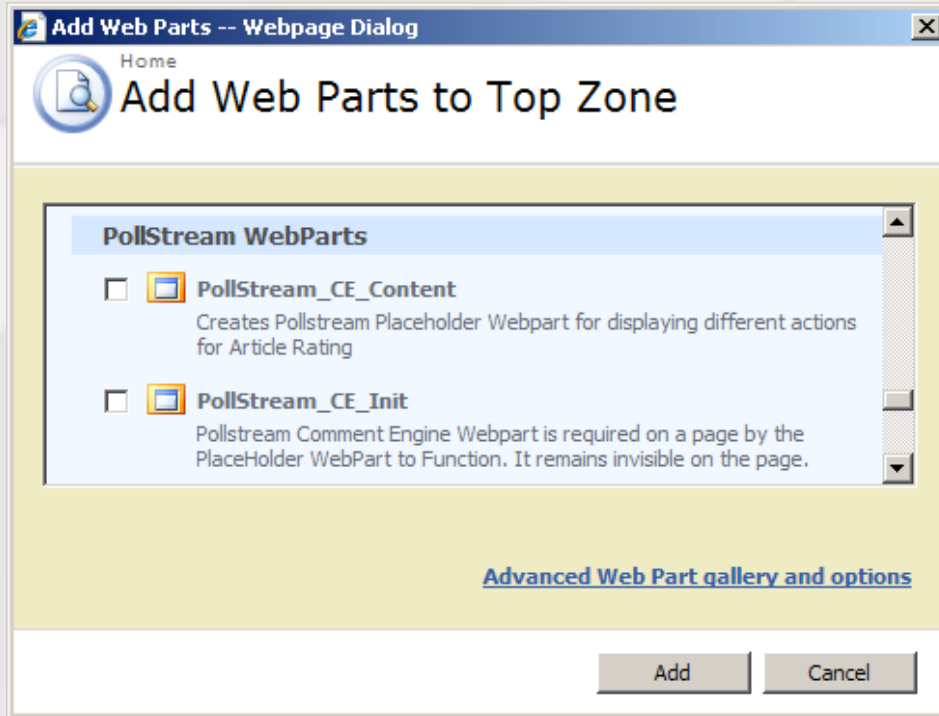

BUSINESS NEEDS

With a constantly growing market share on corporate intranets, chances are good that at least part of your communications team works in a SharePoint environment. Therefore, PollStream also wanted their solution able to be deployed on SharePoint.

SOLUTION

Royal Cyber Inc offered PollStream a Web Part for their solution through which PollStream's solutions can be deployed easily on SharePoint. With the proposed SharePoint Web Part clients can publish the Poll and Comment Engine.

RESULTS

With deployment of SharePoint Web Part, our valued client has already seen tremendous increase in their corporate clients who have intranet in SharePoint.

The Clients can now publish the Poll and Comment Engine as a SharePoint Web Part; making deployment and integration of their commenting and rating features that much simpler.
